

## Triunfo Environment Policy

**Scope:** Triunfo Participações e Investimentos and business units of Triunfo or its companies

As recommended by the Triunfo Sustainability Policy, respect for the environment is a fundamental value of the Company and permeates all of its activities in the various sectors and regions where it operates. Underscoring this commitment, this Environment Policy sets the guidelines to ensure environmental quality, with the focus on minimizing the adverse impacts of Triunfo's operations.

### ➤ Compliance and transparency

Triunfo companies operate in compliance with the environmental laws applicable to their operations, for which they adopt an approach of understanding and cooperation with the institutions entrusted with ensuring compliance with their legal obligations. The Company also remains alert to the voluntary commitments taken regarding environmental practices, such as the United Nations Global Compact, to which it is a signatory. Moreover, it frequently reports the environmental performance of its businesses to all stakeholder groups.

### ➤ Rational use of natural resources

Triunfo strives to promote the rational use of natural resources in all its projects and operations in order to prevent wastage and unnecessary impacts on the environment. For this, it seeks to make its operations increasingly more efficient in order to reduce the consumption of water, energy and other natural resources that are essential to its activities.

### ➤ Risk management

Triunfo strives to identify, as comprehensively as possible, the environmental risks involved in the operations of its businesses, both in operation and under implementation, through appropriate environmental impact studies. Based on such studies, it draws up preventive measures and contingency plans for any emergency situations, in order to mitigate the consequences of environmental accidents and incidents.

➤ Continuous improvement

Triunfo is aware of the environmental risks and impacts of its operations and is committed to establishing and monitoring environmental quality indicators across all its businesses. Continuous monitoring of these indicators enables it to assess the advances and intricacies and to draft action plans focused on improving its practices and processes. In this respect, the Company has in innovation an important tool to develop techniques and procedures that can enhance its environmental performance.

➤ Attention to climate changes

Triunfo recognizes that climate change directly affects its operations, creating risks and opportunities. It thus undertakes to cooperate toward reducing and offsetting greenhouse gas (GHG) emissions arising from its operations – and, as far as possible, its value chain – by effectively contributing to the transition to a low-carbon economy.

➤ Shared responsibility

Triunfo believes that respect for the environment is a value to be shared with the whole society. That is why it invests in environmental education targeted at diverse stakeholder groups, particularly professionals, communities and suppliers. Based on the collective awareness of the importance of conservation and a proactive approach to recuperation, the Company hopes to maintain and possibly increase the environmental quality of the regions where it operates.
